## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1, 4, 11, are rejected under 35 U.S.C. 102(e) as being anticipated by Probst et al (6,038,505).

As per claims 1 and 11, Probst discloses:

- obtaining positioning data using a GPS (column 4, lines 1-5);
- monitoring the automatic transmission to obtain transmission data (figure 2);
- learning whether performance of the automatic transmission *can be* improved utilizing the positioning data and the transmission data (column 7, lines 15-22);
- adjusting a shift threshold for the automatic transmission for the positioning data if it is determined before that the performance of the automatic transmission *can be* improved (column 7, lines 15-22).

Further, it has been held that the recitation that an element is "**can be**" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

Art Unit: 3661

As per claim 4, it has been held that the recitation that an element is "**can be**" perform a function is not a positive limitation but only requires the ability to so perform.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3, 5-10, 13, 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Probst et al (6,038,505) in view of Tsukamoto et al (6,098,005).

As per claims 3, 5, 10, 13 and 15, Probst does not teach how to: determine whether a driving condition exists; determine a desired threshold for the automatic transmission base on the driving condition. However, Tsukamoto teaches it (figure 1 and column 5, lines 35-46). Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to have a better independent system.

As per claims 6 and 16, it would have been obvious to one of ordinary skill in the art to store information regarding the position of the vehicle and the transmission data in order to work properly and

As per claims 7 and 17, it would have been obvious to one of ordinary skill in the art to remove information when it is not used in order to save space and money.

As per claims 8 and 18, it would have been obvious to one of ordinary skill in the art to monitor the load on the transmission in order to know what shift mode to select.

**Art Unit: 3661**

As per claims 20 and 21, Probst does not teach what is claimed by the applicant. However, Tsukamoto teaches it (figure 1).

As per claims 9 and 19, the applicant is claiming basic functions of an automatic transmission.

***Allowable Subject Matter***

5. Claims 2, 12 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

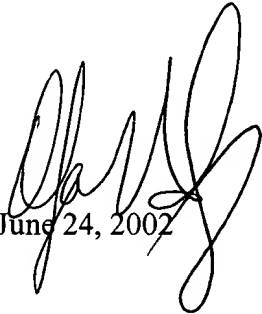

- Moroto et al (5,931,886) discloses a control system for a vehicular automatic transmission.
